

# Change the Button

Create a event listener to listen for when the button has been pressed and perform a change.

---

## The Button

1. Download DeltaEventHandling.zip and import the code in Android Studio.
2. In your EventActivity, get a reference to the button in the UI
3. For that button, set the OnClickListener to be a new anonymous OnClickListener object.
4. override the onClick method and change the button's text to something you would shout if you were really really happy.
5. Run and verify it works!
